Re: Irrigation system backflow devices

Dear H.O.A. members,

In the near future an inspector from the Clermont County General Health District will be conducting a survey of all properties in your subdivision to determine that all irrigation systems are recorded in our data base.

As you may know from the large number of irrigation systems in your community all backflow devices must be installed correctly and tested annually according to the EPA's Safe Water Drinking Act of 1974 to insure safe drinking water for all consumers. This survey will require any device(s) not registered with the county to be certified as working properly to continue use of the irrigation system.

We would like to offer as much information as possible to your community prior to this survey so that everyone understands the importance of protecting our public water supply. We have electronic and printed information available or if you prefer we will meet with your H.O.A. to discuss any questions or concerns to help make this a smooth, successful survey.

We would appreciate it if you would convey this information to your residents to keep them informed of our activities in your neighborhood. Our inspectors drive CCGHD marked vehicles and carry a picture identification badge.

Feel free to contact me as needed.

Thank you,
Kevin B. Jester
Director of Plumbing Inspections

cc: Marty Lambert, Health Commissioner.
Clermont County Water
